TOTAL SOLUTIONS FOR HEALTH & BEAUTY PRODUCTS DEVELOPMENT

Linden Grain Medium is designed for Media fill process simulation for beverage bottling, to test for low acid beverage spoiling bacteria.

Composition**

Ingredients	Gas / Litre
Glucose	20.000
Yeast extract	3.500
Casein peptone	2.000
Ammonium sulphate	2.000
Potassium dihydrogen phosphate	1.000
Magnesium sulphate	1.000
Final pH (at 25 ⁰ C)	4.2±0.2

**Formula adjusted, standardized to suit performance parameters

Principal And Interpretation

Linden Grain Medium is for media fill process simulation for beverage bottling. Media fill is the performance of an aseptic manufacturing procedure using a sterile microbiological growth medium in place of the drug solution. It is a part of validation of an aseptic manufacturing (1). The medium allows the growth of the contaminant flora in the environment, indicated by turbid growth in the broth. Casein peptone provides amino acids and other complex nitrogenous substances. Yeast extract supplies Vitamin B complex. Glucose is the carbohydrate source. Ammonium sulphate and magnesium sulphate acts as nitrogen source. Phosphate buffers the medium.
